(a) One fixed view, four action means

Action	Allowed mean	Q1 change
A	[0.15, 0.60]	-0.10
B	[0.20, 0.70]	-0.10
C	[0.25, 0.75]	+0.10
D	[0.30, 0.80]	+0.10

Group means: (A + C)/2 = 0.65

(B + D)/2 = 0.70

(b) Fixed-policy queries

Q1 c = (-0.1, -0.1, +0.1, +0.1)

No saved candidate yet

Solve once **+1.000 pp**

Q2 c = (-0.105, -0.09, +0.105, +0.09)

Cached: +0.638 pp > +0.100 pp threshold

Reuse **+0.638 pp**

Q3 c = (-0.05, -0.15, +0.15, +0.05)

Cached: -2.250 pp < +0.100 pp threshold

Solve after failed reuse **+0.500 pp**

(c) Whole policy family

Policy: choose C with probability 1

Best robust guarantee: 2.500 pp

Policy lower = family upper (checked exactly)

Constructed illustration • uniform reference • pp = percentage points • displayed values rounded
